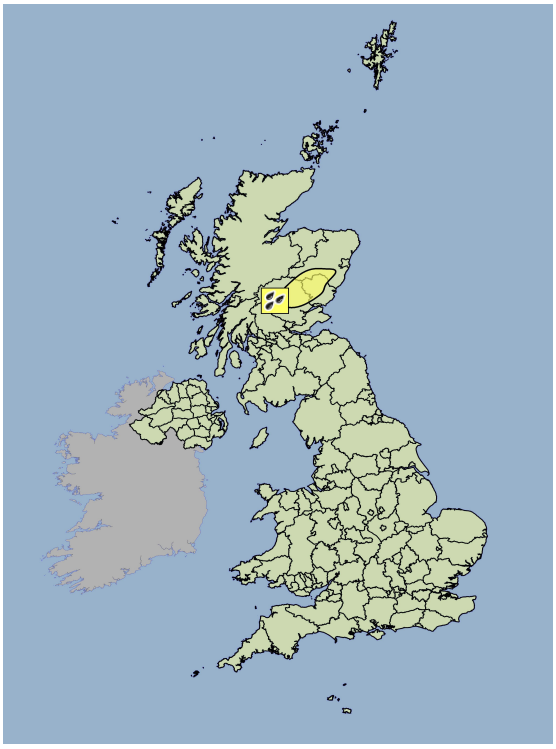
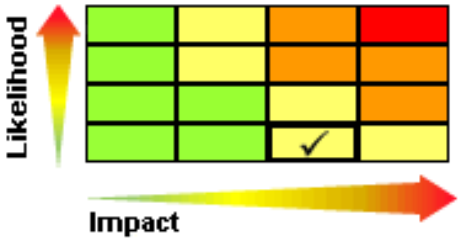
National Severe Weather Warning Service





Chief Forecasters Assessment
Low pressure will be slow-moving over southern Britain on Wednesday and will continue to feed a moist southeasterly airstream into Scotland. This will maintain outbreaks of rain and hill snow especially over higher ground facing these southeasterly winds. Another 20-40 mm may build up through the day, and given the saturated ground, there is a continued risk of flooding. Some hill routes, mainly above 500 m, could be affected by fresh snowfalls.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **00:05 on Wed, 06th Jan 2016** until **23:55 on Wed, 06th Jan 2016**

Further rain is expected during Wednesday, with snow at times above 400-500 metres. Following the persistent and, at times heavy, rainfall of the preceding days, please be aware of the risk of ongoing disruption from surface water flooding and to a lesser extent river flooding, as well as some disruption to transport.
